WHAT TO SAY TO GET THE REEL YOU WANT

Talk to Claude the way you'd talk to an editor sitting beside you. Short, specific, one change at a time. These are the lines that work, word for word. Swap in your own words, seconds and effects.

IN CLAUDE CODE
Type any line here, any time. **Claude runs everything** and tells you what it did in a sentence.

ON YOUR STUDIO
Tap the second on the video, type the note, and it's pinned to that moment. QUICK FIX lines are buttons under the note box: one tap.

1 STARTING A REEL

"Build my studio." First time only. Installs everything, then asks about your brand one question at a time.

"Cut this." Your footage is in inbox. Claude reads it, then offers a hook, what to cut and a few effects for you to pick from.

"Let me do the cut first." **Cut first**: every line as a list, you keep or cut each one, tap This is my cut, then the styling starts.

"Same look as last time." Or tick **Same as last time** on New reel. Your last reel's look, on this footage.

"Just cut it." No plan, no questions. Claude chooses and tells you which line each effect sits on.

"Find b-roll of me working." Pulls clips that match the line from your organised albums.

2 IT DOESN'T LOOK LIKE ME

"Read my brand guide again." Rechecks your colours, fonts and go-to effects before the next cut.

"Make it look like the reels I gave you." Goes back to your own reels and matches them.

"Make this my default." QUICK FIX Claude asks you first, then keeps it for every reel.

3 TOO MUCH, TOO LITTLE

"Too busy here." QUICK FIX Takes something out so the line can breathe.

"Feels flat here." QUICK FIX Gives the line a moment: an effect or a punch word.

"Make it Quiet." **Energy** down: hook, clean captions, two or three moments. Balanced sits in the middle.

"Go Full on this one." Something on screen every 4 to 6 seconds, each on a line you said.

"Cards spinning around my head when I list the tools." Ask for any effect by its name in your effects library. Say **"lose the paper rip"** to take one out.

4 TIMING

"0:04 hook is slow." Any note with a second in it. On the studio you don't even need the time: it pins itself.

"Captions late." QUICK FIX Brings them in a beat earlier.

"Cut this bit." QUICK FIX Takes out the moment you're on.

"Hold that line a beat longer." Leaves room after a line that needs to land.

5 WORDS ON SCREEN

"Text on my face." QUICK FIX Moves it off you.

"Make the captions bigger." Or tap TEXT SIZE OFF at the second.

"Wrong word, it's Riverside." Fixes the caption and saves it to **My words**, so it's right on every reel after.

"Make "free" the punch word." Your loud colour goes on the word you choose.

"End it with my usual ask." Uses the ask you gave Claude at setup, in your words.

6 AFTER IT'S DONE

"Make me a cover." Cover options made from frames of the reel.

"Bring back version 2." Every cut is kept, so any version comes back.

"Read my notes back as rules." One at a time, with the second and what was on screen.

"Yes, keep that." or **"No, that was a one-off."** Only yeses are saved. A no is never asked again.

"Turn that into a check." For a rule that keeps coming back. A cut that breaks it never reaches you.

7 WHEN SOMETHING'S OFF

"Run the check." Shows what every cut is measured against before you see it.

"Stop. What's wrong, in one sentence?" Gets you the one thing to do next.

"Update Reel Studio." Backs up, installs the new version, reads you what's new. Your brand and reels stay put. **"Undo the update"** rolls it back.

"The studio link isn't working." Claude restarts your studio and gives you the link again.

"Send a help note." Writes a file for support with nothing from your reels or brand in it.

SAY IT LIKE A PERSON

One change per note. Three small notes get fixed faster than one long one.

Name the thing. The second, the word, or the effect by its library name.

Say how it feels. "Feels flat" is enough. Finding the fix is Claude's job.

Offered six effects? Pick three. A few chosen on purpose beats a busy reel.
